

# Installation Instructions Disassembly and Reassembly Units

CenTraVac<sup>®</sup> Water-cooled Chillers

Model Numbers: CVHH, CDHH

X39641259007

## ASAFETY WARNING

Only qualified personnel should install and service the equipment. The installation, starting up, and servicing of heating, ventilating, and air-conditioning equipment can be hazardous and requires specific knowledge and training. Improperly installed, adjusted or altered equipment by an unqualified person could result in death or serious injury. When working on the equipment, observe all precautions in the literature and on the tags, stickers, and labels that are attached to the equipment.

December 2024

CVHH-SVN001G-EN

# Introduction

Read this manual thoroughly before operating or servicing this unit.

# Warnings, Cautions, and Notices

Safety advisories appear throughout this manual as required. Your personal safety and the proper operation of this machine depend upon the strict observance of these precautions.

The three types of advisories are defined as follows:

AWARNING Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury. Indicates a potentially hazardous

situation which, if not avoided, could result in minor or moderate injury. It could also be used to alert against unsafe practices.

NOTICE

Indicates a situation that could result in equipment or property-damage only accidents.

#### **Important Environmental Concerns**

Scientific research has shown that certain man-made chemicals can affect the earth's naturally occurring stratospheric ozone layer when released to the atmosphere. In particular, several of the identified chemicals that may affect the ozone layer are refrigerants that contain Chlorine, Fluorine and Carbon (CFCs) and those containing Hydrogen, Chlorine, Fluorine and Carbon (HCFCs). Not all refrigerants containing these compounds have the same potential impact to the environment. Trane advocates the responsible handling of all refrigerants.

# Important Responsible Refrigerant Practices

Trane believes that responsible refrigerant practices are important to the environment, our customers, and the air conditioning industry. All technicians who handle refrigerants must be certified according to local rules. For the USA, the Federal Clean Air Act (Section 608) sets forth the requirements for handling, reclaiming, recovering and recycling of certain refrigerants and the equipment that is used in these service procedures. In addition, some states or municipalities may have additional requirements that must also be adhered to for responsible management of refrigerants. Know the applicable laws and follow them.

## 

# Proper Field Wiring and Grounding Required!

Failure to follow code could result in death or serious injury. All field wiring MUST be performed by qualified personnel. Improperly installed and grounded field wiring poses FIRE and ELECTROCUTION hazards. To avoid these hazards, you MUST follow requirements for field wiring installation and grounding as described in NEC and your local/state/national electrical codes.

## 

#### Personal Protective Equipment (PPE) Required!

Failure to wear proper PPE for the job being undertaken could result in death or serious injury. Technicians, in order to protect themselves from potential electrical, mechanical, and chemical hazards, MUST follow precautions in this manual and on the tags, stickers, and labels, as well as the instructions below:

- Before installing/servicing this unit, technicians MUST put on all PPE required for the work being undertaken (Examples; cut resistant gloves/sleeves, butyl gloves, safety glasses, hard hat/bump cap, fall protection, electrical PPE and arc flash clothing).
   ALWAYS refer to appropriate Safety Data Sheets (SDS) and OSHA guidelines for proper PPE.
- When working with or around hazardous chemicals, ALWAYS refer to the appropriate SDS and OSHA/GHS (Global Harmonized System of Classification and Labeling of Chemicals) guidelines for information on allowable personal exposure levels, proper respiratory protection and handling instructions.
- If there is a risk of energized electrical contact, arc, or flash, technicians MUST put on all PPE in accordance with OSHA, NFPA 70E, or other country-specific requirements for arc flash protection, PRIOR to servicing the unit. NEVER PERFORM ANY SWITCHING, DISCONNECTING, OR VOLTAGE TESTING WITHOUT PROPER ELECTRICAL PPE AND ARC FLASH CLOTHING. ENSURE ELECTRICAL METERS AND EQUIPMENT ARE PROPERLY RATED FOR INTENDED VOLTAGE.

#### WARNING

#### **Follow EHS Policies!**

Failure to follow instructions below could result in death or serious injury.

- All Trane personnel must follow the company's Environmental, Health and Safety (EHS) policies when performing work such as hot work, electrical, fall protection, lockout/tagout, refrigerant handling, etc. Where local regulations are more stringent than these policies, those regulations supersede these policies.
- Non-Trane personnel should always follow local regulations.

**Note:** Graphic labels (shown above) are used for CE application only.

#### Important:

- Before servicing, disconnect all power sources and allow at least 30 minutes for capacitors to discharge.
- All electrical enclosures-unit or remote-are IP2X.

#### **WARNING**

# Refrigerant May Be Under Positive Pressure!

Failure to follow instructions below could result in an explosion which could result in death or serious injury or equipment damage.

System contains refrigerant and may be under positive pressure; system may also contain oil. Recover refrigerant to relieve pressure before opening the system. See unit nameplate for refrigerant type. Do not use non-approved refrigerants, refrigerant substitutes, or non-approved refrigerant additives.

# **Factory Warranty Information**

Compliance with the following is required to preserve the factory warranty:

## All Unit Installations

Startup MUST be performed by Trane, or an authorized agent of Trane, to VALIDATE this WARRANTY. Contractor must provide a two-week startup notification to Trane (or an agent of Trane specifically authorized to perform startup).

#### Additional Requirements for Units Requiring Disassembly and Reassembly

When a new chiller is shipped and received from our Trane manufacturing location and, for any reason, it requires disassembly or partial disassembly, and reassembly–which could include but is not limited to the evaporator, condenser, control panel, compressor/motor, economizer, purge, factorymounted starter or any other components originally attached to the fully assembled unit–compliance with the following is required to preserve the factory warranty:

- Trane, or an agent of Trane specifically authorized to perform start-up and warranty of Trane products, will perform or have direct on-site technical supervision of the disassembly and reassembly work.
- The installing contractor must notify Trane-or an agent of Trane specifically authorized to perform startup and warranty of Trane products-two weeks in advance of the scheduled disassembly work to coordinate the disassembly and reassembly work.
- Start-up must be performed by Trane or an agent of Trane specifically authorized to perform startup and warranty of Trane products.

Trane, or an agent of Trane specifically authorized to perform start-up and warranty of Trane products, will provide qualified personnel and standard hand tools to perform the disassembly and reassembly work at a location specified by the contractor. The contractor shall provide the rigging equipment such as chain falls, gantries, cranes, forklifts, etc. necessary for the disassembly and reassembly work and the required qualified personnel to operate the necessary rigging equipment.

# **Revision History**

- Updated dimensions and weights tables.
- Added Gasket Requirement section and Metric Bolt Size (Gasketed Joints) table to the Unit Reassembly chapter.

# Components

The following components are identified in Figure 1, p. 6 through Figure 8, p. 7:

- 1. Suction Elbow
- 2. Compressor
- 3. Control Power Transformer Panel
- 4. Control Panel
- 5. Condenser
- 6. Motor Housing
- 7. Economizer
- 8. Oil Tank Assembly
- 9. Purge
- 10. Evaporator
- 11. Display Panel

# **General Information**

The information and procedures in this document are to facilitate unit disassembly *for clearance and access reasons during the installation process*.

All CVHH and CDHH chillers ship standard with separable shells and compressor doweling (shell and foot) for take-apart applications. The process is to be initiated by experienced service technicians. Contact your local Trane Service office for assistance if required.

The separable shell feature includes a bolt-together design between the evaporator and condenser and allows the shells to be separated in the field.

*Important:* These procedures do NOT apply to units that have been installed and electrical supply wiring has been completed.

# **Trane Responsibilities**

- Trane, or an agent of Trane specifically authorized to perform start-up and warranty of Trane products, will perform or have direct on-site technical supervision of the disassembly and reassembly work.
- *Prior to disassembly of unit*, remove the oil charge from the oil tank.
- Replace all gaskets with new gaskets or O-rings and sealing compound.<sup>1</sup>
- Evacuate the chiller under 1000 microns.<sup>1</sup>
- If applicable, recharge the chiller with dry nitrogen to 34.5 kPag (5 psig).<sup>1</sup>

# **Contractor Responsibilities**

- Handle/lift and rig equipment.
- Protect all internal components from exposure to elements, which could contaminate or corrode chiller components.
- Replace and/or repair insulation.
- Reconnect electrical connections.
- Spot paint the chiller if necessary.

#### **Metric Conversions**

ft·lb x 1.3558 = Newton·meter lb x 0.4536 = kg in x 25.4000 = mm

<sup>&</sup>lt;sup>1</sup> The contractor should assist a qualified Trane Technician with this responsibility.

#### Table 6. CVHH and CDHH CenTraVac™ chiller maximum weights, 1034.2 kPaG (150 psig) non-marine waterboxes, without starter<sup>(a)</sup>

Note: Chiller weights include the following:
1. TECU 0.028 in. (0.71 mm) tube wall.
2. 1034.2 kPaG (150 psig) non-marine waterboxes.
3. Largest bundles.

(a) To calculate chiller maximum weight with starter, add starter weight from Table 13, p. 19 to the chiller maximum weight from Table 7, p. 17, above.

#### CVHH and CDHH CenTraVac™ chiller maximum weights, 2068.4 kPaG (300 psig) marine waterboxes (1- or 3-pass), without starter<sup>(a)</sup> Table 7.

Note: Chiller weights include the following:
1. TECU 0.035-in. (0.89 mm) tube wall.
2. 2068.4 kPaG (300 psig) marine waterboxes (1- or 3-pass).
3. Largest bundles.

(a) To calculate chiller maximum weight with starter, add starter weight from Table 13, p. 19 to the chiller maximum weight from Table 7, p. 17, above.

# **Unit Disassembly**

# **Remove Nitrogen Charge**

## 

#### **Refrigerant May Be Under Positive Pressure!**

Failure to follow instructions below could result in an explosion which could result in death or serious injury or equipment damage.

System contains refrigerant and may be under positive pressure; system may also contain oil. Recover refrigerant to relieve pressure before opening the system. See unit nameplate for refrigerant type. Do not use non-approved refrigerants, refrigerant substitutes, or non-approved refrigerant additives.

*Important:* Remove the nitrogen charge from the chiller vessel before starting any disassembly procedures.

**Note:** New units ship with a 34.5 kPag (5 psig) dry nitrogen holding charge at nominal 22.2°C (72°F).

*Important:* New units that have been factory run-tested contain residual refrigerant; vent discharge outdoors.

Check to make sure there is a positive pressure holding charge.

# Overview

All CVHH and CDHH chillers ship standard with separable shells and compressor doweling (shell and foot) for take-apart applications. The process is to be initiated by experienced service technicians. Contact your local Trane Service office for assistance if required.

This section discusses a typical disassembly process. Proper lifting techniques vary based on mechanical room layout.

## **A**WARNING

#### Heavy Objects!

Failure to follow instructions below could result in unit dropping which could result in death or serious injury, and equipment or property-only damage. Ensure that all the lifting equipment used is properly rated for the weight of the unit being lifted. Each of the cables (chains or slings), hooks, and shackles used to lift the unit must be capable of supporting the entire weight of the unit. Lifting cables (chains or slings) may not be of the same length. Adjust as necessary for even unit lift.

• It is the responsibility of the person(s) performing the work to be properly trained in the safe practice of rigging, lifting, securing, and fastening the components involved.

- It is the responsibility of the person(s) providing and using the rigging and lifting devices to inspect these devices to ensure they are free from defect and are rated to meet or exceed the published weights.
- Always use rigging and lifting devices in accordance with the applicable instructions for such devices.
- **Note:** Components to reassemble the unit–including gaskets, O-rings, and couplings–are available as a kit for units that are to be taken apart in the field.

#### NOTICE

#### **Equipment Damage!**

Failure to remove the strain relief with the sensor could result in equipment damage.

Do NOT attempt to pull sensor bulb through the strain relief; always remove the entire strain relief with the sensor.

# **Unit-mounted Starter Removal**

Additional horizontal and vertical clearances may be obtained by removing the unit-mounted starter on chillers so equipped. Refer to Figure 11, p. 20 and Figure 12, p. 21.

#### Figure 11. Wye-delta starter

Figure 12. AFDE unit-mounted starter

The following procedures ("," p. 21 and "AFDE Unit-mounted Starter Removal," p. 22) assume the chiller is new and has never been installed and therefore there is no electrical power connected to the chiller. *If there is power to the unit, follow proper lockout/tagout procedures, and any other applicable safety regulations regarding electric power.* 

#### Wye-delta Starter Removal

## **A**WARNING

#### Hazardous Voltage w/Capacitors!

Failure to disconnect power and discharge capacitors before servicing could result in death or serious injury. Disconnect all electric power, including remote disconnects and discharge all motor start/run capacitors before servicing. Follow proper lockout/ tagout procedures to ensure the power cannot be inadvertently energized. For variable frequency drives or other energy storing components provided by Trane or others, refer to the appropriate manufacturer's literature for allowable waiting periods for discharge of capacitors. Verify with a CAT III or IV voltmeter rated per NFPA 70E that all capacitors have discharged.

**Note:** Graphic labels (shown above) are used for CE application only.

#### Important:

- Before servicing, disconnect all power sources and allow at least 30 minutes for capacitors to discharge.
- All electrical enclosures-unit or remote-are IP2X.

#### Figure 13. Wye-delta starter (lower)

- 1. Mark and disconnect the power wiring at the compressor motor terminal lugs inside the starter panel.
- 2. Mark and disconnect control wiring entering the starter panel.

#### Figure 14. Wye-delta starter lift points

#### **WARNING**

#### Heavy Objects!

Placing, assembling, and/or suspending more than one module/subassembly at a time could result in death, serious injury, or equipment damage. Always place, assemble, and suspend modules/ subassemblies one at a time.

- 3. Support the starter with rigging at lift points on top of the starter. Refer to Table 13, p. 19 for starter weights.
- 4. Loosen the bolts which hold the starter to the flange on the motor.
- 5. Remove the bolts which hold the starter to the flange on the motor.
- 6. Using proper rigging, lift and remove the starter panel.
- 7. Store the panel in a clean dry area free of any corrosive agents.

Reassemble the panel on the chiller in reverse order.

#### **AFDE Unit-mounted Starter Removal**

#### **WARNING**

#### Hazardous Voltage w/Capacitors!

Failure to disconnect power and discharge capacitors before servicing could result in death or serious injury. Disconnect all electric power, including remote disconnects and discharge all motor start/run capacitors before servicing. Follow proper lockout/ tagout procedures to ensure the power cannot be inadvertently energized. For variable frequency drives or other energy storing components provided by Trane or others, refer to the appropriate manufacturer's literature for allowable waiting periods for discharge of capacitors. Verify with a CAT III or IV voltmeter rated per NFPA 70E that all capacitors have discharged.

**Note:** Graphic labels (shown above) are used for CE application only.

#### Important:

- Before servicing, disconnect all power sources and allow at least 30 minutes for capacitors to discharge.
- All electrical enclosures—unit or remote—are IP2X.
- 1. Remove nitrogen charge.
- Disconnect and remove control panel wiring from AFDE Adaptive Frequency<sup>™</sup> drive.

#### Figure 15. AFDE (top)

- Open far right drive panel door to access ERIFLEX<sup>®</sup> FLEXIBAR<sup>®</sup> (Flexible Insulated Busbar) connected to compressor motor.
  - a. Use a backup wrench while removing fasteners for **FLEXIBAR**.
  - b. Unbolt **FLEXIBAR** from motor terminals at the motor terminal board.
  - c. Carefully pull FLEXIBAR away from motor terminals.
- 4. Disconnect ground strap at motor/AFDE terminal cover.

Figure 16. AFDE motor terminal cover

5. Unbolt motor/AFDE terminal cover from motor.

Figure 17. AFDE (bottom)

- 6. Unbolt the **AFDE** cooling piping from the back side of the **AFDE** (4 O-ring flanges with 2 bolts each).
- 7. Support AFDE with rigging at lift points on top of AFDE.
- 8. Unbolt the AFDE from the mounting brackets (2 bolts per bracket).
- 9. Remove the AFDE.
- 10. Remove the AFDE brackets from the evaporator shell.
- 11. Secure in a clean, dry environment.
- 12. Install in reverse order.

# **Control Panel Removal**

#### **WARNING**

#### Hazardous Voltage w/Capacitors!

Failure to disconnect power and discharge capacitors before servicing could result in death or serious injury. Disconnect all electric power, including remote disconnects and discharge all motor start/run capacitors before servicing. Follow proper lockout/ tagout procedures to ensure the power cannot be inadvertently energized. For variable frequency drives or other energy storing components provided by Trane or others, refer to the appropriate manufacturer's literature for allowable waiting periods for discharge of capacitors. Verify with a CAT III or IV voltmeter rated per NFPA 70E that all capacitors have discharged.

**Note:** Graphic labels (shown above) are used for CE application only.

#### Important:

- Before servicing, disconnect all power sources and allow at least 30 minutes for capacitors to discharge.
- All electrical enclosures—unit or remote—are IP2X.

#### Figure 18. Control panel

Use the following steps to remove the control panel if additional horizontal clearance is required.

- 1. Mark and disconnect incoming wiring to the control panel.
- 2. Remove the bolts from the bottom of the panel which secure the panel to the lower mounting bracket.
- 3. Loosen the bolts on the back of the panel which secure the panel to the top (suction elbow) mounting bracket. See Figure 19, p. 24.

Figure 19. Control panel mounting bracket

 Two people will be needed to lift the panel clear of the chiller. Refer to Table 9, p. 18 for control panel weight. Steady the panel as the top retaining bolts are removed. Then lift the panel clear. Store the panel in a clean dry area.

Use the reverse order to reassemble the control panel.

# Tracer AdaptiView™ Display Arm Removal

## **WARNING**

#### Hazardous Voltage w/Capacitors!

Failure to disconnect power and discharge capacitors before servicing could result in death or serious injury. Disconnect all electric power, including remote disconnects and discharge all motor start/run capacitors before servicing. Follow proper lockout/ tagout procedures to ensure the power cannot be inadvertently energized. For variable frequency drives or other energy storing components provided by Trane or others, refer to the appropriate manufacturer's literature for allowable waiting periods for discharge of capacitors. Verify with a CAT III or IV voltmeter rated per NFPA 70E that all capacitors have discharged.

**Note:** Graphic labels (shown above) are used for CE application only.

#### Important:

- Before servicing, disconnect all power sources and allow at least 30 minutes for capacitors to discharge.
- All electrical enclosures—unit or remote—are IP2X.

#### Figure 20. Tracer AdaptiView display arm

Use the following steps to remove the Tracer AdaptiView<sup>™</sup> display arm if additional clearance is required.

- 1. Cut tie wraps holding wires inside of control arm and remove wires from arm.
- 2. Remove the four bolts that mount the arm from the channel below the control panel.

Use the reverse order to re-attach the arm to the control panel mounting bracket.

# Purge Unit Removal

## 

# Refrigerant May Be Under Positive Pressure!

Failure to follow instructions below could result in an explosion which could result in death or serious injury or equipment damage.

System contains refrigerant and may be under positive pressure; system may also contain oil. Recover refrigerant to relieve pressure before opening the system. See unit nameplate for refrigerant type. Do not use non-approved refrigerants, refrigerant substitutes, or non-approved refrigerant additives.

## 

#### Hazardous Voltage w/Capacitors!

Failure to disconnect power and discharge capacitors before servicing could result in death or serious injury. Disconnect all electric power, including remote disconnects and discharge all motor start/run capacitors before servicing. Follow proper lockout/ tagout procedures to ensure the power cannot be inadvertently energized. For variable frequency drives or other energy storing components provided by Trane or others, refer to the appropriate manufacturer's literature for allowable waiting periods for discharge of capacitors. Verify with a CAT III or IV voltmeter rated per NFPA 70E that all capacitors have discharged.

**Note:** Graphic labels (shown above) are used for CE application only.

#### Important:

- Before servicing, disconnect all power sources and allow at least 30 minutes for capacitors to discharge.
- All electrical enclosures—unit or remote—are IP2X.

To remove the purge assembly (see Figure 21, p. 26) from the top of the condenser:

- 1. Isolate the purge unit from the condenser shell by closing the vapor and liquid line valves.
- 2. Disconnect and mark all piping and wiring attached to the purge unit. Sand all paint off at points and use a tubing cutter where cuts are to be made. Cut four tubes at points shown in Figure 21, p. 26.

Figure 21. Cut lines where indicated (four places) to remove purge assembly

- 3. Remove the fasteners connecting the purge unit base to its mounting bracket.
- 4. Two people will be needed to lift purge unit clear of the chiller. Refer to Table 9, p. 18 for purge unit weight. Store the purge unit in a clean dry area.

Reassemble the purge unit in reverse order when the process is complete.

## **Economizer Removal**

#### 

#### **Heavy Objects!**

Failure to follow instructions below could result in unit dropping which could result in death or serious injury, and equipment or property-only damage. Ensure that all the lifting equipment used is properly rated for the weight of the unit being lifted. Each of the cables (chains or slings), hooks, and shackles used to lift the unit must be capable of supporting the entire weight of the unit. Lifting cables (chains or slings) may not be of the same length. Adjust as necessary for even unit lift.

## WARNING

# **Refrigerant May Be Under Positive Pressure!**

Failure to follow instructions below could result in an explosion which could result in death or serious injury or equipment damage.

System contains refrigerant and may be under positive pressure; system may also contain oil. Recover refrigerant to relieve pressure before opening the system. See unit nameplate for refrigerant type. Do not use non-approved refrigerants, refrigerant substitutes, or non-approved refrigerant additives.

#### Figure 22. Economizer

Use the following steps to remove the economizer if additional horizontal clearance is required.

- Support the weight of the economizer with either a movable floor jack or gantry and lifting chains with clevises. Economizer weight is provided in Table 9, p. 18; also see submittal. It is recommended that larger size economizers be lifted using overhead rigging.
- If the unit has insulation, remove the insulation and loosen the bolts on the condenser liquid line flange. See Figure 22, p. 27. Do not remove the bolts at this time.
- 3. Loosen the bolts on the evaporator liquid line flange. This connection is near the bottom of the evaporator. See Figure 22, p. 27. Do not remove the bolts at this time.

- 4. Loosen the economizer vent pipe bolts that secure the vent pipes to the compressor interstage castings (unless the compressor has already been removed to gain vertical clearance).
- 5. Secure economizer with appropriate rigging.
- 6. Remove the bolts from the condenser and evaporator liquid line connection flanges. Adjust the floor jack or gantry and lifting chains as necessary to support the weight of the economizer.
- 7. Remove the economizer vent pipe flange bolts.
- 8. Economizers are connected to the condenser shell via four bolted mounting brackets. See Figure 31, p. 31. Remove the bolts at all four mounting brackets.
- 9. When the bolts are free, back the economizer away from the chiller. If using floor jack, the economizer may tend to rotate off the jack towards the chiller; be prepared to offset the rotation.
- 10. Remove the economizer orifice plates and mark them so they are reinstalled in their original position. The orifice with the greatest number of holes is to be located between the economizer and the evaporator. The orifice with fewer holes is to be located between the condenser and economizer.
- 11. Move the economizer away from the chiller and set it on a pallet. Cover all openings to prevent the entry of foreign material into the economizer, condenser and compressor.
- Use the reverse order to reassemble the economizer on the chiller. Be sure to install new gaskets at the appropriate joints.
- Torque all bolts to specifications. Consult with your Trane service group for specific torques for your economizer design.

## Compressor Suction Elbow Removal

#### Figure 23. Compressor suction elbow

The compressor suction elbow has a lifting tab for use in the removal process.

1. Use a lifting clevis to remove the suction elbow, shackletype Crosby screw pin shackle model S-209, stock number 1018482 with a 5/8-in. pin or equivalent.

# Figure 24. Lifting clevis on the suction elbow lifting tab (three-piece elbow style)

- 2. Ensure that control panel mounting bracket bolts have been removed.
- 3. Remove suction elbow bolts at the compressor and evaporator flange connections.
- 4. Being careful to avoid damage to the flange surfaces, lift the suction elbow from the chiller.
- 5. Install protective covering on the evaporator and compressor flange connections.
- 6. Torque all bolts to specifications.

# **Compressor Removal**

#### Figure 25. Compressor and motor

Figure 26, p. 28 and Figure 27, p. 29 show factory-installed compressor doweling on shell and foot.

Figure 26. Compressor foot and discharge volute

Figure 27. Compressor foot and volute doweling

## 

# **Refrigerant May Be Under Positive Pressure!**

Failure to follow instructions below could result in an explosion which could result in death or serious injury or equipment damage.

System contains refrigerant and may be under positive pressure; system may also contain oil. Recover refrigerant to relieve pressure before opening the system. See unit nameplate for refrigerant type. Do not use non-approved refrigerants, refrigerant substitutes, or non-approved refrigerant additives.

#### NOTICE

#### **Equipment Damage!**

Failure to follow instructions below could result in equipment damage.

The cast iron foot of the compressor and the discharge flange of the volute can be broken easily if rough handling of the compressor/motor assembly is allowed. Take great care to prevent this breakage when removing the compressor/motor assembly and setting it down, or when moving it laterally on the floor (e.g., on rollers, etc). Take extra care to gently sit the compressor/motor assembly down and avoid letting it swing or drop into an obstruction while lifting or moving it.

*Important:* Before removing the compressor, remove the starter, control panel, purge, economizer, and suction elbow.

1. Mark and disconnect the control and sensor wiring.

2. Disconnect the control wiring from the inlet guide vane actuators.

#### Figure 28. Compressor lube cooling lines

- Disconnect all external vent lines, motor cooling supply and drain lines, and the oil supply and drain which are connected to the compressor and compressor motor.
  - a. Unbolt the oil return piping flanges at the back base of motor and the discharge volute.
  - b. Disconnect the oil supply piping from base of motor and back of the discharge volute.
  - c. Unbolt the motor cooling return piping flanges at the base of the motor.
  - d. Disconnect the motor cooling supply piping from base of the motor.

#### WARNING

#### Heavy Objects!

Failure to follow instructions below could result in unit dropping which could result in death or serious injury, and equipment or property-only damage. Ensure that all the lifting equipment used is properly rated for the weight of the unit being lifted. Each of the cables (chains or slings), hooks, and shackles used to lift the unit must be capable of supporting the entire weight of the unit. Lifting cables (chains or slings) may not be of the same length. Adjust as necessary for even unit lift.

## **WARNING**

#### Improper Unit Lift!

Using the elbow lifting tab to lift chiller could result in chiller dropping which could result in death, serious injury, or equipment damage.

- Do NOT lift chiller using elbow lifting tab. Elbow lifting tab and approved clevis are used ONLY when removing elbow from chiller.
- Do not lift chiller utilizing waterbox lifting lug. Waterbox lifting lug is to be used only for removing waterbox from chiller.

#### Figure 29. Compressor lift points

- 4. Install certified lifting fixtures to the compressor and motor at lift points on the compressor and motor.
- 5. Secure compressor assembly with proper rigging.

*Important:* Rigging must be able to support the entire weight of the compressor and motor assembly.

6. With the weight of the compressor and motor secured by the external rigging, loosen and remove the bolts at the compressor foot and discharge volute.

#### Notes:

• Jack bolts may be required to separate the foot from the evaporator shell.

- Jack bolts may be required to separate the discharge volute from the condenser flange.
- Cover and store the compressor assembly in a clean and dry environment. Cover all openings of the compressor assembly with plastic and tape.

Reinstall compressor in reverse order.

# Evaporator/Condenser Shell Separation

After the compressor assembly has been removed on separable shell units, the condenser and evaporator shells can be taken apart at flanged connections to reduce the horizontal clearance required for the chiller installation.

## 

#### **Heavy Objects!**

Failure to follow instructions below could result in unit dropping which could result in death or serious injury, and equipment or property-only damage. Ensure that all the lifting equipment used is properly rated for the weight of the unit being lifted. Each of the cables (chains or slings), hooks, and shackles used to lift the unit must be capable of supporting the entire weight of the unit. Lifting cables (chains or slings) may not be of the same length. Adjust as necessary for even unit lift.

- 1. Ensure that condenser and evaporator shells are securely supported on level ground. If not, shim under the bases.
- 2. Support the condenser with rigging using the lifting holes on the tube sheets. See Figure 30, p. 30. Do not lift the shell, simply support it to avoid slipping as the bolts are removed from the connecting flange.

#### Figure 30. Separable shell unit (end view)

3. Remove the bolts from the flanges connecting the evaporator tube sheet and condenser shell support (see

Figure 31, p. 31). Then remove the bolts from the flanges connecting the shells.

**Note:** Some small shell combinations do not have flanged connections between shells.

- 4. Remove the two dowel pins located in the flange on each end of the shell tube sheet connections and lift the condenser clear of the evaporator.
- 5. Reassemble the evaporator and condenser shells in the reverse order.
- 6. Torque all bolts to specifications listed in Table 14, p. 32.

#### Figure 31. Separable shell foot

# **Unit Reassembly**

#### NOTICE

#### **Equipment Damage!**

Failure to remove the strain relief with the sensor could result in equipment damage.

Do NOT attempt to pull sensor bulb through the strain relief; always remove the entire strain relief with the sensor.

It is important to remove used O-rings and gaskets and clean joints before reassembling the compressor with new O-rings and gaskets. All necessary replacement O-rings and gaskets are supplied by the factory when the compressor doweling or separable shell options are ordered.

 Note: Due to the pressure vessel codes applied to CVHH and CDHH CenTraVac<sup>™</sup> chillers, the bolts used for both the economizer sump cover and the oil tank cover are specified for both ASME and PED application (SCREW, METRIC CAP-M16 x 70 mm with FULL THREAD), HEAVY HEXAGON HEAD - ASME SA-193M GRADE B7, ZINC PLATED.
 Do not substitute! Contact your local Trane representative for replacement bolts.

Refer to *CenTraVac O-Ring and Flange Sealant General Service Bulletin* (CTV-SB-66\*-EN), or the most recent version, for proper installation of gaskets, O-Rings, and Loctite<sup>®</sup> sealant. Install a new O-ring on the compressor discharge connection mating surfaces. Use Loctite 515 **Gasket Eliminator** to lubricate the O-ring and provide additional sealing. This is the only sealing compound recommended by Trane for use on O-ring joints. To use this sealing compound, apply a light bead (approximately 1/8-in. in diameter) to the O-ring groove, insert the O-ring and then apply a light bead to the O-ring. Also apply a 1/8-in. bead of sealing compound between the O-ring groove and the bolt hole circle. The parts can now be assembled.

#### **Gasket requirements:**

- Gasket flanged connections: VR40, VR70, 1.6mm, or equivalent gasket
- Flange-to-flange connections: single gasket
- Connections with an orifice plate: two gaskets, one on either side of the plate If bolt lubrication is required, use one of the following:
  - Never Seez (X85530102010)
  - Loctite LB 8150 silver grade anti-seize (Service Part Number LUB00007)

Torque all bolts to specifications listed in Table 14, p. 32.

# Table 14. Bolt torques for waterbox mounting

| Bolt Size |      | Torque  |         |  |
|-----------|------|---------|---------|--|
| (in.)     | (mm) | (ft·lb) | (N∙m)   |  |
| 1/2       | 13   | 70–100  | 95–136  |  |
| 5/8       | 16   | 130–190 | 176–258 |  |

#### Metric Bolt Size (Non-Gasketed Joints or O-ring Joints)

|           | Torque  |             |  |
|-----------|---------|-------------|--|
| Bolt Size | (ft·lb) | (N·m)       |  |
| M8        | 12–16   | 16–22       |  |
| M10       | 24–33   | 33–45       |  |
| M12       | 48–65   | 48–65 65–89 |  |
| M16       | 130–179 | 9 177–243   |  |
| M20       | 239–334 | 324–453     |  |

Reconnect the previously cut compressor/motor oil supply and return lines and the motor cooling lines using the factory-supplied couplings.

#### Table 15. Metric bolt size (gasket joints)

|                | Torque (+/- 6%) |            |       |            |
|----------------|-----------------|------------|-------|------------|
| Bolt Size      | (ft             | ·lb)       | (N·m) |            |

| M20, Class 8.8 | 337             | 160        | 457   | 217        |

# Brazing

#### **A**WARNING

#### **Explosion Hazard and Deadly Gases!**

Failure to follow all proper safe refrigerant handling practices could result in death or serious injury. Never solder, braze or weld on refrigerant lines or any unit components that are above atmospheric pressure or where refrigerant may be present. Always remove refrigerant by following the guidelines established by the EPA Federal Clean Air Act or other state or local codes as appropriate. After refrigerant removal, use dry nitrogen to bring system back to atmospheric pressure before opening system for repairs. Mixtures of refrigerants and air under pressure may become combustible in the presence of an ignition source leading to an explosion. Excessive heat from soldering, brazing or welding with refrigerant vapors present can form highly toxic gases and extremely corrosive acids.

Except as noted in the following, braze with the following filler metals:

- Braze all copper-to-copper joints with A.W.S. BCuP-6 filler metal.
- Braze all copper-to-brass joints with A.W.S. BCuP-6 filler metal using white or black brazing flux.

• Braze all other joints with A.W.S. BAg-28 filler metal.

Bleed dry nitrogen through the lines while brazing to prevent the formation of oxides which can contaminate the oil and refrigerant systems.

**Note:** Use silver soldering with 96% Sn-4% Ag (for example, J.W. Harris Co. Stay Brite<sup>®</sup>) to replace brazing when the heat from brazing would be detrimental to the immediate or nearby parts.

#### Examples:

- 1. Joints next to threaded joints in which the copper or brass threads become too soft and/or Loctite loses its sealing capability due to excess heat.
- 2. Joints next to valves in which the valves cannot be taken apart or are not recommended for brazing.

## **Final Installation Procedures**

After the chiller has been moved to the equipment room and reassembled under Trane supervision, leak testing, and evacuation can be performed by Trane or under Trane supervision. Upon verification of leak tightness, installation can proceed for unit piping, wiring, etc. After installation has been completed, fill out *CenTraVac™ Installation Completion Check Sheet and Request for Trane Service* (CTV-ADF001\*-EN) to schedule the startup; the chiller commissioning process can be completed by Trane or under the supervision of authorized Trane personnel.

Note: Forms in (CTV-ADF001\*-EN) also includes section of CenTraVac<sup>™</sup> Water-cooled Chillers Model CVHH With Symbio<sup>™</sup> Controls Installation, Operation, and Maintenance (CVHH-SVX003\*-EN) and CenTraVac<sup>™</sup> Water-cooled Chillers Model CDHH With Symbio<sup>™</sup> Controls Installation, Operation, and Maintenance (CDHH-SVX003\*-EN).
