

TRANE®

Installation Instructions **Location of Parts**

Commercial Self-Contained R'newal™ Service Program

Model Numbers: SWUA SCRF
 SWUD SCWD
 SCWF SCRD

This document applies to service offering applications only.

Distribution/use of this document is limited to the Trane sales and service organization in support of the Refresh service program and is not intended for independent third party use.

!SAFETY WARNING

Only qualified personnel should install and service the equipment. The installation, starting up, and servicing of heating, ventilating, and air-conditioning equipment can be hazardous and requires specific knowledge and training. Improperly installed, adjusted or altered equipment by an unqualified person could result in death or serious injury. When working on the equipment, observe all precautions in the literature and on the tags, stickers, and labels that are attached to the equipment.

Introduction

Read this manual thoroughly before operating or servicing this unit.

Warnings, Cautions, and Notices

Safety advisories appear throughout this manual as required. Your personal safety and the proper operation of this machine depend upon the strict observance of these precautions.

The three types of advisories are defined as follows:

WARNING	Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.
CAUTION	Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury. It could also be used to alert against unsafe practices.
NOTICE	Indicates a situation that could result in equipment or property-damage only accidents.

Important Environmental Concerns

Scientific research has shown that certain man-made chemicals can affect the earth's naturally occurring stratospheric ozone layer when released to the atmosphere. In particular, several of the identified chemicals that may affect the ozone layer are refrigerants that contain Chlorine, Fluorine and Carbon (CFCs) and those containing Hydrogen, Chlorine, Fluorine and Carbon (HCFCs). Not all refrigerants containing these compounds have the same potential impact to the environment. Trane advocates the responsible handling of all refrigerants.

Important Responsible Refrigerant Practices

Trane believes that responsible refrigerant practices are important to the environment, our customers, and the air conditioning industry. All technicians who handle refrigerants must be certified according to local rules. For the USA, the Federal Clean Air Act (Section 608) sets forth the requirements for handling, reclaiming, recovering and recycling of certain refrigerants and the equipment that is used in these service procedures. In addition, some states or municipalities may have additional requirements that must also be adhered to for responsible management of refrigerants. Know the applicable laws and follow them.

⚠ WARNING

Proper Field Wiring and Grounding Required!

Failure to follow code could result in death or serious injury. All field wiring **MUST** be performed by qualified personnel. Improperly installed and grounded field wiring poses FIRE and ELECTROCUTION hazards. To avoid these hazards, you **MUST** follow requirements for field wiring installation and grounding as described in NEC and your local/state/national electrical codes.

⚠ WARNING

Personal Protective Equipment (PPE) Required!

Failure to wear proper PPE for the job being undertaken could result in death or serious injury. Technicians, in order to protect themselves from potential electrical, mechanical, and chemical hazards, **MUST** follow precautions in this manual and on the tags, stickers, and labels, as well as the instructions below:

- Before installing/servicing this unit, technicians **MUST** put on all PPE required for the work being undertaken (Examples; cut resistant gloves/sleeves, butyl gloves, safety glasses, hard hat/bump cap, fall protection, electrical PPE and arc flash clothing). **ALWAYS** refer to appropriate Safety Data Sheets (SDS) and OSHA guidelines for proper PPE.
- When working with or around hazardous chemicals, **ALWAYS** refer to the appropriate SDS and OSHA/GHS (Global Harmonized System of Classification and Labeling of Chemicals) guidelines for information on allowable personal exposure levels, proper respiratory protection and handling instructions.
- If there is a risk of energized electrical contact, arc, or flash, technicians **MUST** put on all PPE in accordance with OSHA, NFPA 70E, or other country-specific requirements for arc flash protection, PRIOR to servicing the unit. **NEVER PERFORM ANY SWITCHING, DISCONNECTING, OR VOLTAGE TESTING WITHOUT PROPER ELECTRICAL PPE AND ARC FLASH CLOTHING. ENSURE ELECTRICAL METERS AND EQUIPMENT ARE PROPERLY RATED FOR INTENDED VOLTAGE.**

⚠WARNING**Follow EHS Policies!**

Failure to follow instructions below could result in death or serious injury.

- All Trane personnel must follow the company's Environmental, Health and Safety (EHS) policies when performing work such as hot work, electrical, fall protection, lockout/tagout, refrigerant handling, etc. Where local regulations are more stringent than these policies, those regulations supersede these policies.
- Non-Trane personnel should always follow local regulations.

Initial Inspection

If a unit inspection was not performed before the R'newal parts were ordered, assess the equipment condition. Report any observed problems to the owner/building manager before proceeding with the R'newal. Inspect for the following:

- **Evaporator coil condition** - Visually assess unit coil for damage and check its leak history.
- **Thermal insulation** - Visually check unit insulation for water damage, physical damage or soiling.
- **Drain pan problems and biological growth** - Visually check the unit drain pan for biological growth, leaks and/or wear and corrosion that has the potential to cause leaks.
- **Refrigerant piping and joints** - Visually inspect the condition of refrigerant lines and connections.
- **Condenser condition** - Visually inspect condensers for damage and review their leak and repair history. If water cooled, assess if proper water treatment has been maintained and whether heat exchanger fouling is indicated.
- **Water regulating valve condition** - If installed, visually inspect condenser water regulating valves and actuators for damage and assess their leak and repair history.
- **Condenser water flow switch service history** - Assess the service repair history of the condenser water flow switches and determine if their reliability indicates they should be replaced.
- **Supply fan drive condition** - Inspect sheaves, drive belts, shaft and motor for wear and replace if necessary.
- **Control panel condition** - Inspect control panel wiring and components. Check tightness of components and wiring and replace individual components if required.

Location of Parts

The following tables and figures are to be used to identify the items received when a Commercial Self-Contained R'newal package is ordered. Material to be used for a Commercial Self-Contained R'newal can vary greatly depending on the options selected and the unit being R'newed. Refer to the sales order documentation to confirm ordered options.

The nameplate sticker will ship in a separate envelope under the part number 018503790100. Peel the nameplate from the backing and affix next to the existing nameplate.

Standard Parts

Standard parts that should be received for every Commercial Self-Contained R'newal order are:

- Compressor(s)
- Compressor contactors and auxiliary switches
- Supply fan motor contactor(s)
- Filter driers
- Compressor crankcase heaters (crankcase heaters are supplied but may or may not be needed depending on the application)
- High and low pressure switches
- Airflow switch

The following parts are standard, but are dependent on the existing unit type:

- Oil pressure switch (SWUA only)
- Phase loss monitor (SCWF, SCRF, and SWUA only)
- Electric heat contactors (if unit shipped with electric heat)

Table 1. Compressor kits

017403080100	COM01622	1	COMPRESSOR, CRHR400A-3*AS, REMFG, 40 TON, 200/60/3, CSC R'NEWAL COMPRESSOR, CRHR400A-3*AS, REMFG, 40 TON, 200/60/3

Optional Parts

The following parts will be received depending on system selections:

- Supply fan motor (high efficiency, open drip proof)
- Supply fan bearings
- Water-cooled condensers
- Variable frequency drive and installation parts

Kit Contents and Installation Notes

Notes:

- *The following tables of kit contents and applications are accurate at the time of this document publication. Some parts will go through supersessions and component part numbers will change. If a part received in one of the kits is not as listed, check to see if a supersession has occurred. If parts are added or subtracted to kits, this document will be updated to reflect those changes.*
- *Refer to the original unit Installation, Operation, and Maintenance manual or other previously published service literature for procedures to follow when installing the parts received.*
 - *Not all model numbers and design sequences are supported with a configured product. Contact support to determine if the model can be supported.*

Compressor Kits

Notes:

- *Reciprocating compressors from Charlotte will include a crankcase heater.*
- *Scroll compressors ship with a crankcase heater that may or may not be needed depending on the application.*

(a) Refer to original unit model number for refrigerant circuit configuration.

The model number breakdown is: Digit 5 - Refrigerant Circuit Configuration

N = Independent - R22

M = Manifolded - R22

P = Independent - R22 - High Capacity

R = Independent - 407C

T = Independent - 407C

(a) Refer to original unit model number for refrigerant circuit configuration.
The model number breakdown is: Digit 5 - Refrigerant Circuit Configuration
N = Independent - R22
M = Manifolded - R22
P = Independent - R22 - High Capacity
R = Independent - 407C
T = Independent - 407C

High-Low Pressure Switch Kits

Table 16. High-low pressure switch kits

R'newal Kit	Part Number	Qty	Description
017405700100	CNT00593	1	CONTROL; HI/LO PRESSURE, 270 OP/190 CL CSC R'NEWAL
	CNT01317	1	CONTROL; PRESS, HIGH, OPEN 270 PSI, CLOSE 190 PSI, 0.12 NPTE MALE PORT, 72IN. LEADS
017405710100	SWT00487	1	CONTROL; HI/LO PRESSURE, 270 OP/210 CL CSC R'NEWAL
	CNT00542	1	SWITCH;HIGH PRESSURE, CUTOFF, 120/240VAC, OPEN: 270 PSIG, CLOSE: 210 PSIG, -65 TO 275 DEG F
017405720100	CNT01087	1	CONTROL; HI/LO PRESSURE, 360 OP/270 CL CSC R'NEWAL
	CNT01086	1	CONTROL; LOW PRESSURE CUTOUT, 120/240 VAC, OPEN: 20 PSIG, CLOSE: 35 PSIG

Drive Kits

Drive kits are optional and are set up to replace Square D drives on SWUD, SCWF, SCRF, SCWD and SCRD units. For more information refer to latest version of PART-SVN117A-EN (*Installation: Conversion to Trane TR200 from ATV58 or ATV66*) and PART-SVB22B-EN (*General Service Bulletin: Variable Frequency Drive Replacement List*), or the most recent revisions.

Part numbers shown are the latest part numbers at the time of publication of this literature.

(a) Additional parts may be required for this application. For more information, refer to PART-SVB22B-EN (or the most recent revision).

Diagrams

Figure 1. Typical phase monitor wiring for Commercial Self-Contained units

The phase monitor module interfaces with the existing unit in three places. Terminals labeled L1, L2, and L3 should be connected to the three-phase power entering the unit (after the unit disconnect if present). The terminal labeled 115 Vac should be wired to the hot leg of the control power transformer (CPT), while the terminal labeled C should be wired to the neutral leg of the CPT. Terminals Y and Y-OUT are the terminals of a normally open switch that is actuated by the phase monitoring circuit. The switch is closed when three-phases are present and open when a phase or control power is lost. The switch is rated for a maximum of 10 A at 28 Vdc and

a minimum of 10 mA at 5 Vdc. This switch needs to be wired to the unit controls in order to shut down the unit.

Trane recommends wiring terminals Y and Y-OUT to the emergency stop on the Control Module. If the jumper that shipped with the unit is present, it should be removed. If the control has been wired to an external switch, the phase-loss module should be wired in series with this switch.

For units that do not have controls, the wire terminals Y and Y-OUT could be connected to either the Remote Signal Input, Compressor Status, cooling tower interlock, or other location depending on how the unit was wired after it was installed.
