

Custom Air Handling Unit Design Day with Trane®

Tap into Trane's Systems, Applications and Product Expertise.

Collaborate with Trane Custom Air Handling experts

When a standard air handling unit can't meet the requirements, a Custom Air Handling Unit from Trane can deliver the solutions you need. You want the best product for the project, and collaboration is the key. Design Day with Trane is a chance to team up and problem solve your Custom Air Handling Unit with a dedicated team at our Fort Smith, Arkansas manufacturing facility. Together, we will work through specifications, analyze requirements, and determine the best way to balance various needs including efficiency, performance and cost. It's time well spent to ensure your Custom Air Handling Unit ultimately delivers the right results for years to come.

Know your (new) options

Today's focus on energy-efficient design and sustainable systems is unprecedented. New compliance standards and sustainability preferences have spurred a flood of new technologies. Now more than ever, you need a clear understanding of the available options. During your Design Day, we'll introduce new choices, help you make

informed decisions, and give your team the information you need to report back to other project stakeholders.

You bring your team, we'll bring ours

Design Day participants can include mechanical engineers, building owners, facility managers, contractors... virtually anyone who has a vested interest in the building's performance. Trane will gather our engineers, product managers, account managers and other specialists to round out the expertise you need. This level of collaboration and upfront time investment among project stakeholders and Trane Custom Air Handling experts not only enables problem-solving but also saves significant time throughout the lifespan of the project.

Go from theory to practice

The Design Day process works through the details in a single day.

- Define and prioritize requirements
- Uncover and overcome project obstacles
- Evaluate a range of alternatives
- Zero in on one course of action
- Lay out the plan in design software
- Discuss out-of-the-ordinary installation requirements

Let's work through it together

A Design Day at Fort Smith begins before the in-person session and includes post-event follow-up. Here's what you can expect:

- **Pre-event discovery and planning**

The process begins before Design Day, with pre-event conference calls to discuss the objectives. This will set the agenda and help us both to determine which team members should attend.

- **Trane Design Day event**

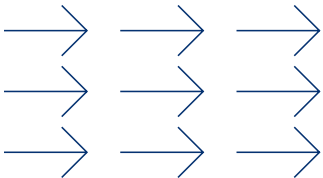

This in-person meeting of minds between your team and ours will lead to a workable custom air handling unit design by the end of the day. Trane's specialists will guide your team through a collaborative process that helps you investigate and evaluate options. We will work together and review specifications to make sure the custom solution we've landed on together will meet all specifications and requirements. Be sure to also leave time for a factory tour and to learn about new Trane products.

- **Post event follow-up**

Your Trane Design Day team will keep the collaboration going after the event. Your Account Manager will keep you updated as the unit goes into production.

Consider the day an investment in success

A custom air handling unit is a big commitment. Trane's Design Day process gives you extra reassurance that the unit will deliver the right benefits, both short and long term.

RSVP today

Contact your Trane Account Manager to schedule your exclusive Design Day.

Since you'll already be here...

Tour the manufacturing facility

Trane can extend the Design Day opportunity by inviting you into the facility where the Custom Air Handling Unit will be built. You'll experience firsthand the quality and care that goes into every Trane air handling unit.

Learn about new Trane products

Raise your professional game. This is a great opportunity to learn firsthand about our new products and industry solutions that can benefit your future projects.

Trane – by Trane Technologies (NYSE: TT), a global climate innovator – creates comfortable, energy efficient indoor environments through a broad portfolio of heating, ventilating and air conditioning systems and controls, services, parts and supply.
