Section 1. Safety Considerations

IMPORTANT: Read this manual carefully before attempting to install, operate, or perform maintenance on this hydronic coil. Installation, service, and maintenance should be performed by qualified technicians only.

NOTE: "Warnings" and "Cautions" appear at appropriate places in this manual. Read these carefully. Your personal safety and the proper operation of this heating product require that you follow them carefully. The manufacturer assumes no liability for installations or services performed by independent dealers.

Safety signal words are used to designate a degree or level of seriousness associated with a particular hazard. The signal words for safety markings are WARNING and CAUTION.

WARNING

WARNING indicates a potentially hazardous situation which, if not avoided, could result in property damage, death or serious personal injury.

CAUTION

CAUTION indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It is also used to alert against unsafe practices and hazards involving only property damage.

1.1 WARNINGS

WARNING

THE INFORMATION IN THIS GUIDE IS FOR USE BY INDIVIDUALS HAVING ADEQUATE ELECTRICAL AND MECHANICAL BACK-GROUND. ANY ATTEMPTS, BY UNQUALIFIED PERSONS, AT PLUMBING, INSTALLING OR REPAIRING A HYDRONIC SYSTEM OR CENTRAL AIR CONDITIONING PRODUCT COULD RESULT IN PROPERTY DAMAGE, SEVERE PERSONAL INJURY OR DEATH. THE MANUFACTURER OR SELLER CANNOT BE RESPONSIBLE FOR THE INTERPRETATION OF THIS INFORMATION, NOR CAN IT ASSUME ANY LIABILITY IN CONNECTION WITH ITS USE.

WARNING

ELECTRICAL HAZARD!

DISCONNECT ALL ELECTRICAL POWER, INCLUDING REMOTE DIS-CONNECTS BEFORE INSTALLING OR SERVICING. FOLLOW PROP-ER LOCKOUT/TAGOUT PROCEDURES TO ENSURE THE POWER CAN NOT BE INADVERTENTLY ENERGIZED. FAILURE TO FOLLOW THIS WARNING COULD RESULT IN SERIOUS PERSONAL INJURY, DEATH, OR PROPERTY DAMAGE.

WARNING

SAFETY HAZARD!

THIS HYDRONIC COIL MUST ONLY BE USED IN NON-POTABLE CLOSED WATER SYSTEMS. FAILURE TO FOLLOW THIS WARN-ING COULD RESULT IN SERIOUS PERSONAL INJURY, DEATH, OR PROPERTY DAMAGE.

WARNING

HIGH PRESSURE HAZARD!

MAXIMUM ENTERING WATER TEMPERATURE IS 180°F. WATER TEMPERATURES EXCEEDING 180°F COULD CAUSE A HIGH PRES-SURE BURST. FAILURE TO FOLLOW THIS WARNING COULD RESULT IN SERIOUS PERSONAL INJURY, DEATH, OR PROPERTY DAMAGE.

WARNING

SCALD HAZARD!

THIS SYSTEM CONTAINS HOT WATER AND OPERATES UNDER PRESSURE. WATER TEMPERATURES ABOVE 125°F CAN IN-STANTLY CAUSE SEVERE BURNS OR DEATH. USE CAUTION WHEN SERVICING THIS EQUIPMENT. ALLOW SUF-FICIENT TIME FOR THE WATER TO COOL BEFORE OPENING THE SYSTEM DRAIN. FAILURE TO FOLLOW THIS WARNING COULD RESULT IN SERIOUS PERSONAL INJURY, PROPERTY DAMAGE, OR DEATH.

WARNING

LEAK HAZARD!

IF THE HYDRONIC COIL HAS A LEAK, USE CAUTION WHEN SERVICING THIS EQUIPMENT. THOROUGHLY WIPE OFF EXCESS WATER FROM ALL COMPONENTS AND ALLOW ADEQUATE TIME FOR THE COMPONENTS TO DRY COMPLETELY BEFORE SERVIC-ING SYSTEM.

FAILURE TO FOLLOW THIS WARNING COULD RESULT IN SERI-OUS PERSONAL INJURY, PROPERTY DAMAGE, OR DEATH.

1.2 CAUTIONS

CAUTION

SAFETY HAZARD! Sharp Edge Hazard. Be careful of sharp edges on equipment or any cuts made on sheet metal while installing or servicing. Personal injury may result.

CAUTION

SAFETY HAZARD! All joints must be leak free.

Section 2. General Information

This accessory hydronic coil is designed to deliver primary or secondary heating capacity using a nonpotable water source. Maximum entering water temperature is 180 °F.

- 1. Check the hydronic coil nameplate to confirm that the selected hydronic coil is approved for use with the air handler.
- Check the components received for damage. Report any defects or shortages to the transportation company immediately.

| Water Coil Model Numbers | | | | | | | | | | | | | | | | |

Section 3. Hydronic Coil Assembly

Section 4. Install Hydronic Coil

STEP 2 - Insert hydronic coil assembly into heater compartment.

- 1. Tuck factory wiring out of the way and into the grooves provided in cabinet.
- 2. Align the rails of the coil with the tracks in the air handler cabinet and slide the hydronic coil into place.

Section 5. Piping

STEP 1 – Remove hydronic piping access cover from heater compartment panel.

- 1. Remove 5/16 hex screw on back of cover.
- 2. Attach new wiring diagram to the inside of the heater panel.

NOTE – The hydronic coil can be installed in upflow, downflow, or horizontal positions. The following illustrations show the recommended vertical and horizontal piping configurations. Piping must consist of two vertical pipes or two horizontal pipes. **NOTE –** When piping the water lines, the entering water pipe will always be furthest from the blower.

STEP 2 – Run piping.

1. Run field supplied hydronic pipes in parallel to one another. See the piping recommendations for the different air handler orientations. For each air handler orientation, the pair of pipes can be run either horizontal or vertical.

Note: Piping must allow for removal of heater compartment panel and not obstruct service access to hydronic coil.

STEP 3 – Dry fit stub outs.

1. Connect, but do not solder field stub out lines to the coil. Allow a minimum of three (3) inches of lines before using an elbow.

STEP 4 – Dry fit elbows and piping.

 Dry fit the elbows and piping to ensure access. Water lines must be staggered enough to allow for insulation. The lines must also be close enough that the panel will slide over and down the lines.

STEP 4 – Solder stub outs.

- 1. Once a proper fit has been confirmed, remove the heater panel and slide it down the pipes so it is out of the way of any soldering and will not be affected by the solder heat.
- 2. Solder the stub out connections and allow tubing to cool.

Note: Place heater panel back on air handler and continue soldering water lines. Keep the flame and heat away from the air handler panels.

STEP 5 - (Recommended) Install vent.

Note: If an air vent is applied in the hydronic system, it must be installed outside of the cabinet and must not obstruct service access to hydronic coil.

Section 6. High Voltage Wiring

STEP 1 – Select the conduit entry point.

- 1. Select the conduit entry point you will use to bring in your high voltage wiring.
- 2. Remove plug.
- 3. Install conduit per air handler Installer's Guide.

Note: Top or right entry points are recommended for hydronic coil high voltage wiring. This allows clearance to service coil.

STEP 2 - Run field wiring to entry point.

1. See air handler Installer's Guide.

STEP 3 - Connect high voltage wiring

- 1. Disconnect the existing pigtail harness from the air handler.
- 2. Connect the new pigtail harness that is shipped with the hydronic coil.
- 3. Connect the high voltage field wiring, using wire nuts, to the pigtail harness.

STEP 4 – Replace Heater compartment panel on air handler.

STEP 5 – Insert air seal.

- 1. Insert the two piece air seal around the water lines to ensure an airtight fit.
- 2. Insulate the water lines per local codes.

Section 7. Performance Tables
