

Trane Natural Gas Management

Leverage our expertise for optimal pricing and supply management.

Trane® Energy Supply Services can assist in the procurement and management of natural gas for customers in deregulated states. Our market expertise saves you time and keeps you informed of your market position, giving you confidence that you're acquiring your natural gas as cost-effectively as possible. We help secure optimal pricing and contract terms from suppliers of natural gas across the country. Ongoing monitoring of natural gas markets enables you to act on opportunities, allowing you to better manage your energy costs.

Nomination and balancing services consists of a report on your facility's energy usage, delivery and storage and informs you of all costs necessary to flow gas to your facility. This level of monthly reporting helps you manage your natural gas position to prevent errors and ensures that your facility's gas supply needs are continuously met.

Market position reporting assesses all positions you've taken in the natural gas commodity markets. The report is updated following each purchase. This provides you with financial reporting and enables you to assess the success of your hedging program.

Market timing recommendations provide information on factors that influence energy markets. This information can be used to lock in next year's prices today, safeguarding you from rising energy costs.

Client market/operational calls are made as often as market conditions and client needs require. We'll update you on the state of the market and assess your account activity to ensure your procurement needs are met as cost-effectively as possible.

Asset optimization manages daily operations and supply contracts for large gas-consuming customers such as municipals, large industrials and power plants, and customers who own pipeline or storage capacity. With our services, you'll have the benefit of strong, established relationships with the individuals at the pipelines and suppliers operating on those pipelines. We understand the pipeline assets available in a given area that are critical to uninterrupted, cost-effective natural gas supply. We are typically included on suppliers' and local distribution companies' instant communication lists for operational flow orders or operational matching orders, which enables us to communicate real-time delivery and consumption issues to you. We also work with these same entities if a balancing or pricing issue occurs, and we'll work to resolve any issues on your behalf.

Annual budgeting-

helps you set next year's budget for energy based on historical usage, changes in market pricing or forecasted utility rates. Let Trane Energy Supply Services do the work for your utility or energy budget, saving time and ensuring accuracy.

Trane – by Trane Technologies (NYSE: TT), a global climate innovator – creates comfortable, energy efficient indoor environments through a broad portfolio of heating, ventilating and air conditioning systems and controls, services, parts and supply.
