

Making sense of energy markets

You don't have to be an energy expert when you enlist the help of Trane® Energy Supply Services. That's our job. We want you to have all the resources you need to gain a deeper understanding of the current energy market — and what's ahead. Timely publications, customized market calls, webinars and seminars offer insights that can help you keep abreast of the markets so together we can maximize your current and future energy spend.

Daily market price reports provide the most up-to-date information on market settlement prices or closing values by contract month and for specific periods of time (winter, summer, annual averages). Having the most current price information better positions you to react quickly when the markets are favorable.

Customized market calls allow our team of market professionals to discuss relevant information driving energy pricing as well as trends that will impact future pricing. This one-on-one call also allows you to have a conversation with our Market Intelligence team about current energy topics or client-specific energy needs.

Energy price forecasting and commentary leverages our comprehensive, ongoing participation in the energy marketplace and enables us to see market trends and quantify price risks. This forward-looking view provides the ability to more accurately plan your energy use for maximum cost savings.

Regulatory and legislative monitoring utilizes ongoing updates for timely analysis of key developments that affect the price and reliability of energy. This information provides you with advanced knowledge of conditions that may affect your energy use and supply so that you can plan accordingly.

Weekly and monthly market publications help you stay up to date with data and discussion surrounding electricity and natural gas market fundamentals. Growing your energy knowledge puts you in a better position to meet your energy needs as cost-effectively as possible.

Our webinar series informs you on a multitude of energy topics ranging from high-level outlooks to region-specific presentations to commentary on recent changes in the energy landscape. These webinars allow our energy team to relay pertinent information and commentary on a variety of energy issues to a wide audience.

Energy Vision is an annual seminar held over two days that focuses on emerging trends and industry best practices in the management of energy supply and demand. Whether you are just learning about energy management or you're always looking to increase your knowledge about energy topics, Energy Vision is designed to inform so you can make better decisions about your energy costs and consumption.

Trane – by Trane Technologies (NYSE: TT), a global climate innovator – creates comfortable, energy efficient indoor environments through a broad portfolio of heating, ventilating and air conditioning systems and controls, services, parts and supply.
