

# Extend Your Protection

Warranties for replacement hermetic compressors

The compressor is the heart of an HVAC system. A unit functions only as well as the compressor(s) in it. Because of this, Trane is committed to providing premium quality replacement compressors, not only for Trane equipment, but also for equipment designed by other manufacturers. Trane carries compressors for a variety of applications from manufacturers such as Copeland, Danfoss, Tecumseh, and, of course, Trane-manufactured OEM replacement compressors.

Optional extended warranties provide additional peace of mind, ensuring that Trane will stand behind the compressors. No installer wants to do a job a second time, but if there is an issue, extended warranty protection can protect the installer, as well as the customer, in the case of a manufacturing defect.

There are two different types of warranties available for compressors. Contact your local Trane parts distributor to see if either of these apply in your situation.

## Replacement compressor warranty

Should a part in the compressor covered by this warranty be found defective in material or manufacture, this warranty will provide for parts or a replacement compressor (at the discretion of Trane). The replacement compressor warranty is available for a 2nd-5th year term. Warranties are not available on any compressor that has been given in whole or part as a warranty replacement.

Quality and expertise are characteristics you expect from Trane, and extended warranties are no exception. When purchasing an extended warranty, you know you have Trane's backing. Let an extended warranty offer you worry-free protection for up to five years.

## Conditions and exclusions

Extended warranties are available for purchase before the ship date of the applicable equipment. Warranty exclusions are as follows:

- Equipment repaired or altered in a manner which causes or materially contributes to the claimed defect (in the judgment of Trane)
- Corrosion, erosion or deterioration
- Damage due to accident, abuse, external causes (including controls) or freezing
- Nuisance calls, freight and additional labor resulting from problem access areas
- Any damage caused by failure to perform equipment manufacturer recommended maintenance
- Repair and replacement of system controls
- Replacement or addition of refrigerant
- Labor claims submitted on non-warranted compressor failures
- Per diem allowances

The extended warranties are conditioned upon the equipment operating under normal use and service. Warranty claims will be processed only after the product(s) and warranties have been paid in full or Trane has approved alternative credit arrangements. In no event shall Trane be liable for any special, consequential or incidental damages no matter under what legal theory advanced. Trane makes no other warranty express or implied.

Parts given in satisfaction of this warranty do not include a warranty of their own.

In the event of a conflict or inconsistency between Trane literature and the extended warranty certificate, the terms and conditions of the certificate shall govern.

## First year compressor labor warranty

The first year labor warranty will cover repair or replacement labor for the compressor, including:

- Evacuation and cleanup for burnouts
- Actual technician travel time
- Reasonable time for system diagnosis
- Reasonable rigging and crane charges

The labor warranty is available with various maximum coverage limits. These warranties are available in the United States and Canada.

Contact your local Trane parts distributor to see if these warranties apply to your situation.

Trane is committed to providing quality replacement compressors, and you can be confident that your local Parts Center will get you the compressors you need to get the job done. The Parts Center can also be your one-stop shop, whether you need a filter drier, contractors, relays, oil, test kits or valves.

Trane – by Trane Technologies (NYSE: TT), a global climate innovator – creates comfortable, energy efficient indoor environments through a broad portfolio of heating, ventilating and air conditioning systems and controls, services, parts and supply.
