Pan-Clear Drain Tablets

Keeps Pan & Drain Lines Clear

- For condensate drain pans
- Helps control odors, overflows and water damage

CHM00313 100 ct.

Condensate Pan Strips

All cooling units, whether they are air conditioners, dehumidifiers, or other refrigeration equipment, extract water from the air. Some undesirable consequences may result. These potential consequences may include:

- Overflow from clogged air conditioner drain pans due to the formation of slime. This can cause expensive damage to the ceiling and other property.
- Contaminants found in drain pans can cause foul-smelling odors.
- Retained water can cause corrosion and premature failure of the drain pan.

Time-Release

The treatment stays dormant when the drain pan is dry. The product will continue activating and de-activating as wet and dry conditions change (See Figure below). Replacement should be done according to a regular maintenance schedule (every 90 days is recommended). Simply remove the "old" strip and dispose of it properly.

Features and Benefits

- Water activated, time released material contains growth of mold, algae, and other microorganisms
- A solid-packaged strip releases the actives, leaving only the used polymer shell to be discarded.
- The system provides dependable, sustained time release pan protection for only pennies a day.
- The system adds a light, pleasant scent to the air as it works.
- Contains a corrosion inhibitor.

Sizes

The size of the strip corresponds to the tonnage of the cooling unit in which it is installed. Use 400 cfm per ton.
