

# Tracer AdaptiView™

Chiller Control Upgrade

## An even better view into your chiller. Help your customer get more out of their chiller with a Tracer AdaptiView™ control upgrade.

### Designed for operators, by operators.

It only makes sense. A better user interface makes a better user. We don't just think that, we've proven it—through intensive user-design testing with chiller plant operators like you.

You asked for fingertip control with animated graphics for instant system analysis and instant response. You also wanted instant access to chiller performance data in easy-to-read trending charts and diagnostic reports. With Tracer AdaptiView, you can readily see how your chiller plant is running, and how you could make it run better.

### A better chiller, a better building.

Your HVAC system accounts for nearly 45% of all energy costs in your building.\* That's probably more than any facility manager would like. And if you could control those costs more effectively, you would.

Tracer AdaptiView helps operators keep the chiller plant running at its most efficient level. All thanks to a graphical user interface that provides a deeper understanding, along with quicker response times.

Meanwhile, you'll be keeping building occupants more comfortable—and most likely with less effort, less energy and less hassle. That's what expert chiller control is all about.

Tracer AdaptiView upgrade is a comprehensive retrofit package for CenTraVac® chillers. The upgrade package includes everything that you will need to migrate to the most advanced technology in chiller operation and control.

## Why Should You Partner with Trane?

- Reduce risk with enhanced monitoring capabilities and upgrades to constantly improve and protect controls
- Feel confident through multiple Extended Factory Warranty options with Trane
- Give your customers access to the latest chiller controls to optimize and better maintain their equipment
- Customers get a much needed upgrade while Trane works alongside teams to perform this complex scope of work

## Take charge of your chiller

- A Large, full-color touch screen for fingertip control of chiller subsystems
- B Instant access to operational data for faster issue analysis and resolution
- C At-a-glance status updates readily display key operating parameters
- D Easy-to-read trending charts and diagnostic reports help fine tune chiller control
- E Industry-leading algorithms optimize control during rapidly changing conditions
- F Adjustable arm and tilt screen for better viewing

Trane – by Trane Technologies (NYSE: TT), a global climate innovator – creates comfortable, energy efficient indoor environments through a broad portfolio of heating, ventilating and air conditioning systems and controls, services, parts and supply.
