

# Remote Management Services

# What can Remote Management Services do for your business needs?

Building operators require outcome-oriented recommendations that help to address everyday operational challenges. Remote Management Services integrates remote connectivity technology, proprietary analytics and expertise that continuously collects, interprets and acts on building data to improve performance of building systems; assisting building owners in fulfilling their business mission.

Remote Management Services is a technology driven approach with a simple yet effective process. The building control unit collects around-the-clock data for the Network Operating Center via the connectivity module. This data is then analyzed and filtered by analytics to enable in-house experts detect problems and provide solutions that impact building operations.

## Addresses key operational challenges

### Lower Operating Cost

- Visibility to energy consumption on a real time basis
- Systems are maintained at peak performance and efficiency level

### Improved Productivity

- Remote diagnostics enables active operator involvement
- Preemptive services enables informed decisions

### Uptime Management

- Prevent disruption of systems operation
- Increase equipment life

### Centralized/Consolidated Operational Control

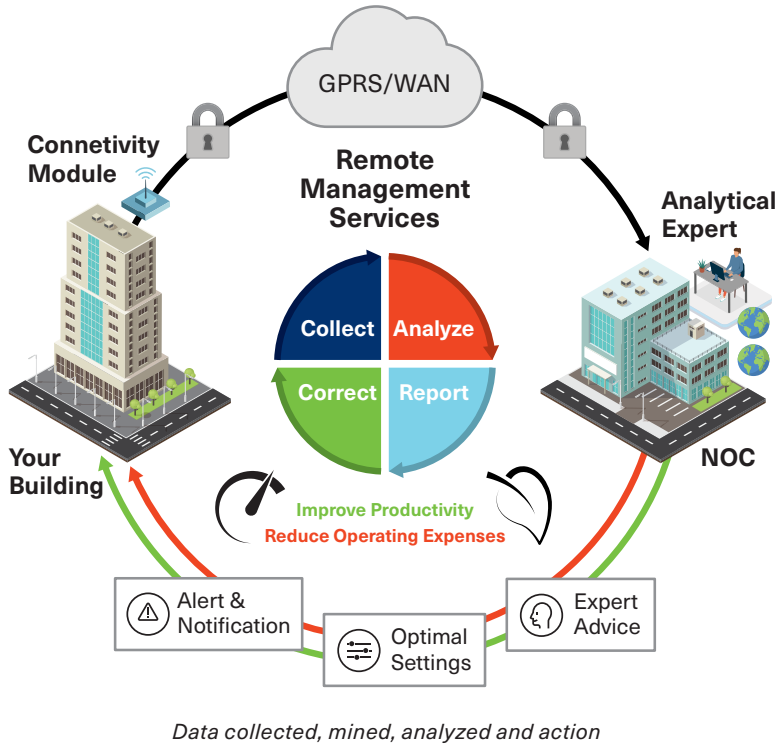

- Continuous monitoring and notification of events
- Identify equipment activity deviations across sites

*Operational Challenges and resolutions*

## Advises performance measures that reduce functional costs of your building

<b>Alarm Notification</b>	Get updated on equipment while on the move
<b>Energy Analytics</b>	Visibility drives savings and action
<b>Equipment Performance Management</b>	Keep equipment working at optimum levels
<b>Multisite Management</b>	Drive best practices and savings across the enterprise
<b>Benchmarking</b>	Baseline best performance with industry operational standards
<b>Expert Recommendations</b>	Backed by Trane experts providing recommendations for increased savings

# The solution architecture

## Enable building sustainability and green initiatives

- Whether it's a single building or multiple sites, Remote Management Services identifies When, Where and How energy is used and reports the slightest deviations
- Manage multiple buildings with a limited pool of maintenance personnel, identify opportunities to reduce energy, benchmark across the best in industry as well as within the enterprise, thus enabling continuous improvement Monitor and record various energy and performance related parameters continuously and receive segregated reports for different equipment clusters
- Embedded intelligence provides real time views of building equipment helping you to prevent unplanned downtime, undetected inefficiency and deferred maintenance

## Flexible solutions for your business needs

### Lite

- Alert Notification
- Energy Reports/Billing
- Equipment Performance

### Standard (+ Lite)

- Energy Analysis
- Equipment Performance Management
- Expert Advisories and Reports

### Expert (+ Lite & Standard)

- Internal & External Site Benchmarking
- Advanced Diagnostics

*Remote Management Services offerings for different business needs*

**“Activate the intelligence of your building today and leap into the future with Remote Management Services”**

*Dashboard snapshots view, monitor, track, trend and report*

# “Initialize proactive operation”

Set energy usage targets, track progress towards them, and then measure deviations from your established goals

Quickly assess which of your sites are performing well and which facility requires corrective action

With the help of the Alarm Center, you can establish defined operating boundaries and receive notifications via email or SMS notices

*Measure and manage building energy consumption by proactive operation*
