50 Hz Package Cooling Units Product Data

Convertible Models
TCC030,040,050

30, 40, 50 MBh

IPB-99-3(50)-EN-10-15-99

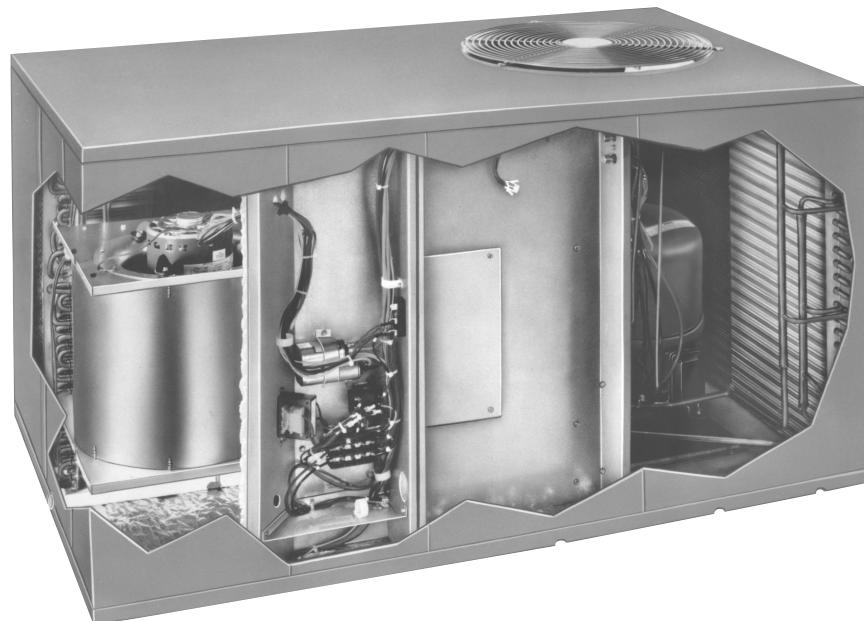

General Features

It's Hard To Stop A Trane.[®]

T-Top™
Weatherguard™
Corrosion Resistant Screws
Powder Paint
Water-Shed™ Base

High Efficiency
Climatuff® Compressor
DuraTuff™ Plate Fin Coil
Sloped Drain Pan
100% Foil Faced Insulation
Easy Access

Features and Benefits

- **High Efficiency**

Impack performance is among the highest in the industry.

- **Climatuff® Compressor**

Protection against chemical, electrical, and mechanical stresses are built in for efficiency and a longer life. The compressor is backed by a 5-year limited warranty, with an optional warranty for 5 more years.

- **Convertibility**

Impack units are easily converted from horizontal to downflow with the removal of one screw from each panel. Accordingly, the need to stock both dedicated horizontal and dedicated downflow models has been eliminated.

- **Installation**

The ease of installation and application flexibility exhibited through the design reduce both field time and material.

- **Application**

The low profile horizontal duct take-offs eliminate the need for expensive transition ducts in crawl space applications.

- **Commonality**

The common cabinet among the TCC's, WCC's, and YCC's minimizes both the training of sales and service personnel and replacement parts inventory.

- **Flexibility**

A single curb fits the entire Impack line from 1.5 tons through 5 tons thereby providing great installation flexibility on shopping malls, factories, schools, and other commercial buildings where a mix-match of tonnages and utilities is desired.

- **Water-Shed™ Base**

Superior water integrity is accomplished with the Water-Shed™ base pan having elevated downflow openings and a perimeter channel that prevents water from draining into the ductwork.

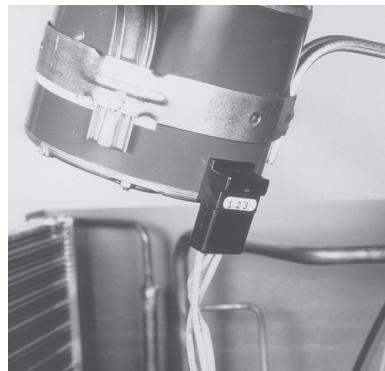

Standard Equipment

- **Easy Access**

All electrical components can be diagnosed and replaced with the removal of one panel that is attached with two screws.

- **Service**

All wiring is both numbered and color coded thereby reducing training and servicing costs related to circuit tracing and components replacements.

- **Maintenance**

A plug on the outdoor fan motor allows the top cover to be removed completely without the hassle of cumbersome wires. The unique service orifice ring allows the indoor fan motor/blower to be removed as a unit.

- **Plate Fin Coil**

Refrigeration coils are built with internally enhanced copper tubing for high efficiency with less coil area.

- **Air Filter**

The filter frame kits fit inside the unit and provides filtration in either horizontal or downflow applications.

- **Shipping**

Unit dimensions were carefully selected to provide an attractive aspect ratio and for shipping and handling considerations.

- **Good Neighbor**

Most units can be installed flush with the residence or building thereby minimizing the ground space required. Blankets of insulation reduce blower noise and energy losses to the outside environments.

- **Rooftop Mounting**

The cabinets are physically smaller than most competitive models. This means less intrusive installations on residential rooftops where aesthetics are critical.

- **Handling**

The three-way wooden skid allows for easy loading between the wheel wells on pickup trucks for transporting to job sites.

- **Structure**

The units are lighter weight through the use of high technology components thereby reducing mounting structure requirements and difficulty when handling.

- **Duct Flanges**

Only Impack has downflow duct flanges for duct attachments that preserve the built-in water integrity.

- **Corrosion**

The drain pan is engineered material and eliminates the need for coatings and sealers to prevent sweating and corrosion. The heavy gauge, zinc-coated steel cabinet has a weather resistant enamel finish that stays attractive and protects your investment for years.

- **Low Ambient Control**

Zero degree ambient cooling is accomplished with two kits. One for low cost installations when full tonnage is not needed. The other kit maintains head pressure and full capacity at zero degrees.

- **Quality and Reliability Testing**

We perform a 100% coil leak test at the factory. The evaporator and condenser coils are leak tested at the factory. The evaporator and condenser coils are leak tested at 200 psig and pressure tested to 450 psig respectively. In addition the Impack designs were rigorously rain tested at the factory to ensure water integrity. Shipping tests are performed to determine packaging requirements. Factory shake and drop tests are used as part of the package design process to help assure that the unit will arrive at the job site in top condition. Additionally, all components are inspected at the point of final assembly. Substandard parts and components are identified and rejected immediately. Every unit receives a 100% run test before leaving the production line to make sure it lives up to rigorous Trane® requirements. We at Trane test our designs at our factory and not on our customers!

Impack Accessories

- **Standard Thermostats**

No special thermostats are needed with Impack units.

- **Filter Frame Kit**

The Impack filter frames accept standard filters and fit inside the unit. The frame kits function in either horizontal or downflow duct configurations.

- **Coil Guard Kit**

The guards are vinyl coated 1" x 3" wire grills. These grills will protect the coil from hail, kids with sticks as well as normal shipping and installation handling damage.

- **UNI-CURB™**

One universal curb fits all the Impack models. It ships knocked down. The curb design incorporates the popular locking tabs for quick and easy assembly. Full perimeter curbs are also available for all models.

- **Economizer**

The economizer fits inside the unit with only the rain hood and barometric relief on the outside. Cabling (with polarized plugs) is shipped with the economizer. This cabling is easily routed to the control box where it terminates in low voltage pigtail. The economizer features a fully modulating low voltage motor eliminating the need for any high voltage wiring. The economizer must be used with the filter frame kit . . . no return air filter in the economizer kit. A dry bulb sensor is shipped with the economizer. The economizer was not designed for use in horizontal applications. Heat pump applications require a relay kit.

- **Enthalpy Control Kit**

For those applications specifying an economizer with enthalpy control, this control can be used in place of the dry bulb sensor or, alternately, two enthalpy controls can be paired to provide differential enthalpy control.

- **25% Fresh Air Kit**

The kit installs over the horizontal return air opening with six screws for downflow requirements. It can be used on horizontal air flow applications by cutting a hole in the return air duct or in the unit filter access panel.

- **Rectangular to Round Duct Kits**

The adapter kit can be used in either horizontal or downflow applications.

- **Low Ambient Kit**

An EDC provides low ambient cooling to 0° F with some reduced capacity and protects the system against evaporator icing during other unusual cooling conditions.

- **Fan Delay Relay Kit**

This solid state kit is a time delay that keeps the indoor blower on for about ninety seconds and increases the SEER. It wires into the low voltage unit pigtail.

- **High Static Motor Kit**

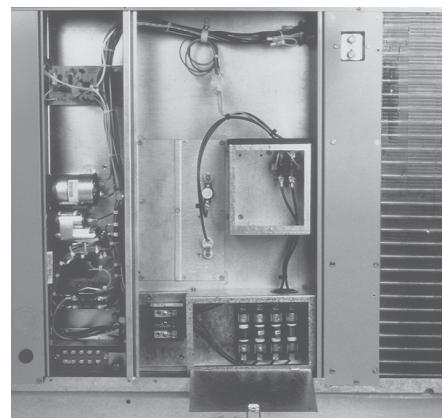

Contains a higher torque indoor fan motor.

- **Lifting Lug Kit**

Four reusable lugs in each kit allow units to be easily lifted to rooftop installations. These lugs snap (no screws required) into slots in the unit drip lip channel.

- **Start Kit**

The kit mounts in the control box for those installations with specific conditions such as excessive voltage drop due to long wires. (This is a capacitor and start relay kit and is not a PTC device.) This kit can be a good specification buster!

- **Single Power Entry Kit**

The kit minimizes installation costs by reducing the load center circuit requirement and reducing the number of circuit pulls needed.

Optional Equipment

OPTIONAL EQUIPMENT FOR PACKAGE UNITS (Check mark [✓] indicates accessories included).

Controls

Field Installed Control Options

Thermostats

Two stages heating/cooling or one stage heating/cooling thermostats are available in either manual or automatic changeover.

Programmable Electronic Night Setback Thermostat

Heating setback and cooling setup with 7-day, 5-1-1 programming capability. Available in 2 heating/cooling or 1 heating/cooling versions with automatic changeover.

Economizer Controls

The standard equipment offering is a fixed dry bulb changeover control. In addition to the standard offering, there are two other field installed control accessories.

Enthalpy Control

Replaces the dry bulb control with a solid state dry bulb and wet bulb changeover controller which has a fully adjustable set point. Enthalpy control offers a higher level of

energy savings potential than the standard dry bulb control due to the additional wet bulb sensing capability.

Differential Enthalpy

Replaces the standard dry bulb control with two enthalpy sensors that compare total heat content of the indoor air and outdoor air to determine the most efficient entering air source. This control option offers the highest level of energy efficiency available.

TCC-F Cooling Models

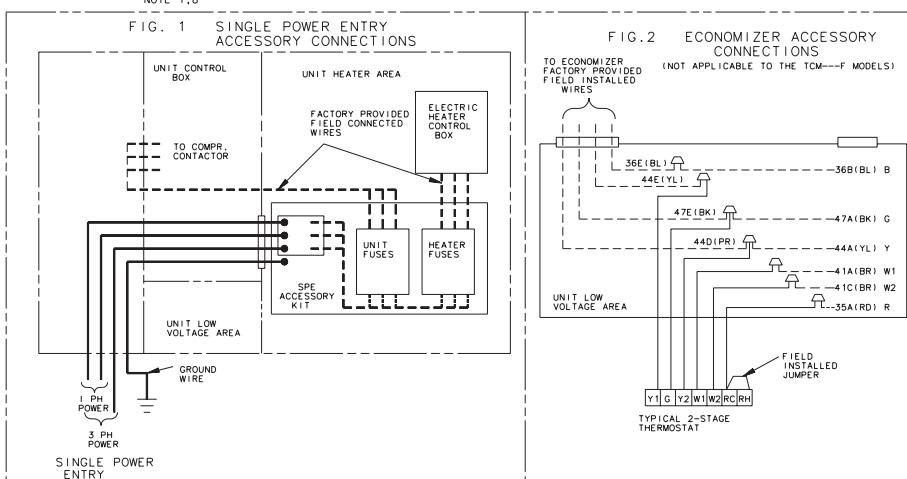

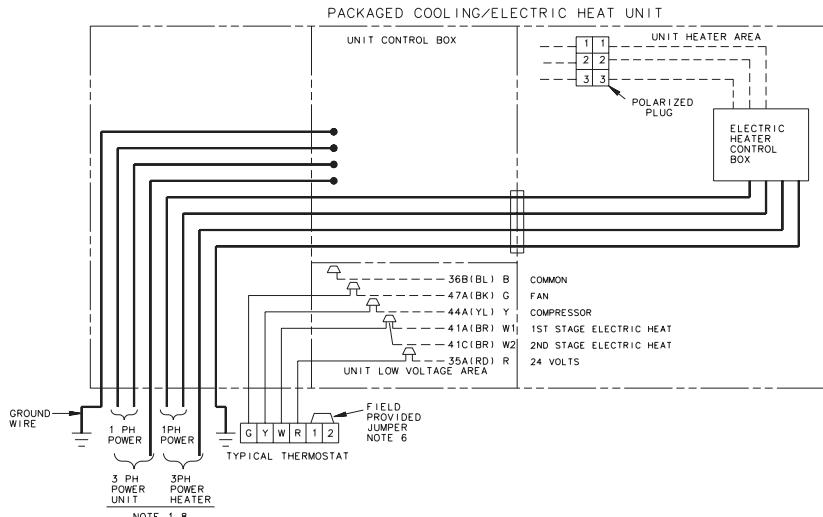

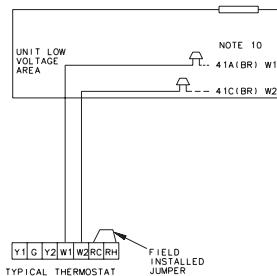

FIG. 4 TWO STAGE ELECTRIC HEAT CONNECTIONS

NOTES:

1. FUSED DISCONNECT SIZE, POWER WIRING AND GROUNDING OF EQUIPMENT MUST COMPLY WITH CODES.
2. BE SURE POWER SUPPLY AGREES WITH EQUIPMENT AND HEATER NAMEPLATE.
3. LOW VOLTAGE WIRING TO BE 18 AWG MINIMUM CONDUCTOR.
4. SEE HEATER NAMEPLATE FOR CURRENT RATING OF HEATER USED.
5. SEE UNIT AND HEATER DIAGRAM FOR ELECTRICAL CONNECTION DETAILS.
6. JUMPER MUST BE CONNECTED BETWEEN 1 AND 2 FOR FAN TO OPERATE IN HEATING.
7. SOME THERMOSTATS PROVIDE THE 'G' SIGNAL IN THE COOLING MODE ONLY. TO PROVIDE THE 'G' SIGNAL IN THE HEATING MODE AN ACCESSORY RELAY IS REQUIRED. SEE FIG 3 FOR PROPER CONNECTIONS.
8. FOR COOLING ONLY OMIT THE ELECTRIC HEATER, ASSOCIATED POWER WIRES, AND THE 'W' SIGNAL THERMOSTAT WIRE.
9. FIG. 4 DEMONSTRATES CONNECTION OF THE TWO STAGE ELECTRIC HEAT THERMOSTAT ACCESSORY ONLY. FOR FURTHER UNIT CONNECTION DETAILS REFER TO THE OTHER FIGURES.
10. THE 41A(BR) WIRE IS FIRST STAGE ELECTRIC HEAT. IF THE ELECTRIC HEATER ACCESSORY HAS TWO HEATING STAGES THE 4C(BR) WIRE IS SECOND STAGE ELECTRIC HEAT.

Field Wiring

Wiring Diagram for TCC030,040,050FD00B Units

NOTES:

1. CONNECTIONS SHOWN ARE FOR A TYPICAL THERMOSTAT. SEE SCHEMATIC SUPPLIED WITH THERMOSTAT FOR PROPER CONNECTIONS. LOW VOLTAGE WIRING TO UNIT MAY BE NEC CLASS 2 AND MUST BE A MIN. OF 18 A.W.G.
2. MAXIMUM ADDITIONAL EXTERNAL LOAD (PILOT DUTY) BETWEEN "B" AND "R" OF 0.5 AMPS, 24 VAC IS AVAILABLE WHEN A HEATER IS INSTALLED.
3. SEE WIRING DIAGRAM WITH HEATER FOR DETAILS OF HEATER WIRING.
4. IF ANY OF THE ORIGINAL WIRE AS SUPPLIED IN THIS UNIT MUST BE REPLACED, REPLACE IT WITH APPLIANCE WIRING MATERIAL RATED AT 105° C.
5. INDOOR BLOWER MOTOR CONNECTIONS SHOWN ARE THE TCC036F4, -036FW, -030FD, -060F4, -060FW AND -050FD UNITS. FOR INDOOR BLOWER MOTOR CONNECTIONS FOR THE TCC048F4, -048FW, AND -040FD UNITS SEE INSERT A AND B.

From Dwg. 21D729988 Rev. 10

Mechanical Specification Options

General

The units shall be horizontal airflow as shipped and convertible to downflow. All units shall be factory assembled, piped, internally wired and fully charged with R-22. Units shall be UL listed and carry a UL label. All units shall be factory run tested to check cooling operation, fan and blower rotation and control sequence. Units shall be designed to operate at ambient temperatures between 115°F and 55°F in cooling as manufactured. Cooling performance shall be rated in accordance with ARI standards.

Unit Casing

All components shall be mounted in a weather-resistant steel cabinet with an enamel finish. Access panels shall be provided for unit controls and indoor coil and fans. Indoor air section compartment shall be completely insulated with fireproof, permanent, odorless glass fiber material. Knockouts shall be provided for utility and control connections. Drain connections shall be provided to accommodate indoor water runoff.

Compressor

The compressor shall be a hermetically sealed, high efficiency Climatuff® compressor. Internal overcurrent and over temperature protection, internal pressure relief shall be standard. Crankcase heaters shall be standard on all three phase models.

Refrigeration System

All units shall have capillary tube refrigerant control. Service pressure tap ports, and a refrigerant line filter dryer shall be standard.

Indoor and Outdoor Coils

Coils shall be internally finned or smooth bore 3/8" copper tubes mechanically bonded to configured aluminum plate fin as standard. Evaporator coil leak and pressure tested to 200 psig; condenser coil tested to 450 psig.

Indoor Fan

The indoor fan shall be a forward curved, centrifugal-type fan with a multiple-speed, direct drive motor. Motor is permanently lubricated and shall have built-in overload protection.

Outdoor Fan

One, direct-drive, statically and dynamically balanced propeller fan shall be used in a draw-through vertical discharge configuration. Permanently lubricated weather proof motor shall have built-in thermal overload protection.

System Controls

System controls include condenser fan, evaporator fan and compressor contactors.

Accessories

Roof Curb — The roof curb shall be designed to mate with the unit and provide support and complete weathertight installation when properly installed. Adhesive back polyurethane sealing strips shall be provided to ensure an airtight seal between supply and return openings of the curb and unit. The roof curb design allows field fabricated ductwork to be connected directly to the curb. Curb ships knocked down for field assembly, and includes factory-installed wood nailer strips.

Fully Modulating Economizer

This accessory shall be field installed and be composed of the following items: 0-100% fresh air damper, damper drive motor, fixed dry bulb enthalpy control, and low voltage pigtail for electrical connections. Solid state enthalpy or differential enthalpy control is optional. Economizer operations shall be controlled by the preset position of the enthalpy control. A barometric relief damper shall be standard with the economizer and provide a pressure operated damper that shall be gravity closing and prohibit entrance of outside air on equipment "off" cycle.

Manual Outside Air Dampers — Rain hood and screen shall be field installed. Suitable for up to 25% outside air.

Anti-Short Cycle Timer — Timed off device that ensures a minimum of five minutes off between compressor cycles.

Control Options

Standard Indoor Thermostats — Two stage heating/cooling or one stage heating/cooling thermostats shall be available in either manual or automatic changeover.

Programmable Electronic Night Setback Thermostat

Programmable electronic thermostat shall provide heating setback and cooling setup with 7-day, programming capability. 1H/1C or 2H/2C models available.
